Summary

Frontend design engineer with 5+ years of experience, including 3+ years building production software for a US company. I design directly in code and own products end to end, from UI and data model to deployment and long-term maintenance. Solo-built a clinic platform that has run in production for 3 years and tracked 10,000+ patients.

Experience

ProviderLINK

Frontend Developer

Jul 2023 – Present

Texas, USA (Remote)

CareSync – Clinic Operations Platform | Next.js, TypeScript, Zustand, Firebase, shadcn/ui

[Demo](#)

- Solo-built and maintained a clinic operations platform in production for 3 years, tracking 10,000+ patients through rooms and visit workflows across 4 role-based dashboards (doctor, assistant, receptionist, admin).
- Built a live room board on Firestore real-time listeners with per-room visit timers, emergency flags, clinic-configurable statuses with colour and sound alerts, and keyboard controls.
- Redesigned and rebuilt v2 (JavaScript, React, Redux, MUI → TypeScript, Next.js, Zustand, shadcn/ui), adding CSV/Excel appointment import, kiosk and manual check-in, and per-phase visit timing that powers a new reports section. Production-ready, awaiting rollout.
- Reworked the data model to remove v1 integrity bugs, including deleted rooms persisting under doctors and status changes that drove patient counts negative; added rooms shared across doctor schedules and accessibility improvements.

Arista ATS – Applicant Tracking Platform | React, TypeScript, Node.js, Express.js, MongoDB, Socket.IO

[Demo](#)

- Solo-built (research, design, code, deployment) a hiring platform used in production by 30+ client companies, handling 800+ candidates across 50+ jobs.
- Built drag-and-drop hiring pipelines per job, interview scheduling with Zoom links and scorecards, and two-way email, all in one workspace.
- Added AI resume scoring against each job's requirements and 8 user roles with separate permissions, plus client account management after hire.

Upwork

Web Application Developer

Jan 2021 – Jun 2023; occasional through 2025

Freelance

- Delivered 30+ projects for clients worldwide, including dashboards, admin panels, and custom web apps, owning each from requirements to deployment.

Niblet – AI Nutrition Coach | Next.js, TypeScript, Firebase, OpenAI API, Tailwind CSS

[Demo](#)

- Hired by a US client to improve the code and design of a calorie-tracking app (5.0 rating), then independently extended it into a conversational AI nutrition coach.
- Built chat-based logging where one message can record a meal and weight, photo-based meal estimates users can correct, goal and progress tracking, and full data export and deletion.

Skills

Languages: TypeScript, JavaScript (ES6+), HTML, CSS

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, MUI, Zustand, Redux

Backend and Data: Node.js, Express.js, MongoDB, Firebase (Firestore, Auth), Socket.IO

AI and Services: OpenAI API, Anthropic API, Cloudinary, Vercel, Heroku

Design: UI/UX, responsive design, design systems, accessibility

Education

Jahangirnagar University

B.Sc. in Statistics and Data Science

2024

Dhaka, Bangladesh
